A
Presentation On

"Website Creation"

Submitted By
Mr. Appayya Badger.
MSc IV Semester
Reg No:CS181005

Under the Guidance of
Prof.Shivanand Gornale

INDEX

Intoduction:

- The first page provides several links. The Home page contains several information about the site like campus, management, facilities, infrastructure etc. User Login module helps the user to login to the site. For that he must type the username and password correctly.

- Admin can put the flash news and the events corner display the latest developments, announcements and events associated with the school activities.

- Admin can also upload the images in the school gallery and can be removed whenever necessary.

Objective:

- The main Objective of the project is to provide the updated School Information of students and Latest information of the school. All information is managed by the school administrator.

Existing System:

- The school is not having the website and we took this challenge to build the school website which can be later hosted as school website.

Proposed System:

- In order to make the site dynamic and more interactive we have tried to include a database link to our school website. Provision has also been made to display the latest events and announcements associated with the school online along with a dynamic photo gallery. We have developed our project using the three tier architecture which uses different languages.

Hardware and Software Requirement:

Software Requirement:
